Antonio Annis is a civil hydraulic engineer with a joint PhD degree between the University of Florence (Italy) and the Technical University of Braunschweig (Germany), focused on data assimilation and flood modelling. Antonio spent almost 9 years as research fellow at the Water Resources Research and Documentation Center (WARREDOC) of Università per Stranieri di Perugia (Italy), where he also co-founded and assumed the role of CEO of GRIDDIT Srl, an strat-up company focused on the large scale flood hazard and risk assessment with innovative geospatial web services. From June 2024 he started a position of Assistant professor at University of Padova. Antonio's research interests are on integration of remotely sensed data to flood modelling, hydro-geomorphic modelling, terrain analysis, extreme events, data assimilation and urban hydrology.
